

PHARMACEUTICAL

Under directed temperature

Temperatures control for vaccines

Vaccines are sensitive to the variations of temperature. In case of break of the cold chain, they can become dangerous for health. GIOVATEMP is a real proof of the preservation temperature of your products. If the maximum temperature allowed is exceeded, a red cursor progresses in the middle of the indicator and will indicate you the approximate overrun time of your products.

This will allow you to know simply if your vaccines are operational or not.

Temperatures control for medicines

Auto-adhesive capsule

Some medicines, like the insulin, are sensitive to the temperature. AURETEMP allows you to be signalled of any incident of temperature. . If the maximum temperature allowed is exceeded, the indicator will trend to red on its whole surface for a preset time and will indicate you if your products have been subjected to a break of the cold chain or not. .
